## **Variable:**

- It stores a value.

## **Example of Variable:**

A = 50;

B = 60;

C = a + b;

## **Data Types:**

- It Specifies range of values in a given data;

## **Example of Variable:**

### **1. INT:**

A = 50;

- It is Numeric Number in arithmetic.
- Int in programming Language.

## 2. Float:

B = 60.2;

- It is Decimal Numbers in Arithmetic.
- Float in Programing Language.

## 3. Char:

C = 'c';

- It is Character in English.
- Char in Programing Language.

## 4. String:

D = "Name";

- It is Name or alphabets one or more than one in English.
- String in programing Language.

## 5. Double:

E = 2156125.212;

- It is Large Decimal Values in Arithmetic.
- It is double in Programing Language.
